DID YOU EVER WONDER WHAT INFRARED CAMERAS DO?

The pictures below show what our infrared cameras can see, (radiant heat) which can be very useful in real estate inspections. For example, it's very difficult to determine if a radiant floor heating system is functioning, especially in the summer. But our cameras can pick it up quickly. They are so sensitive that they can even pick up the warmth of a handprint radiating heat on a cooler wall. The heating elements in an oven are immediately confirmed as working and warm radiators are extremely easy to see. Bottom line is, they are great tools for inspectors!

Hot water pipes in a radiant heated floor.

Heating elements in an oven.

Warm handprint on a cold wall.

A hot water radiator.
