Co-Op Inspections

Co-Op Inspections are more economical and take less time because they typically do not include:

- Components and systems that are maintained by the Co-Op Association and property management company, such as common area and common area components including central plant heating and cooling, roofing, siding, walkways, driveways, other central amenities.
- Often central/common area defects are noticed during our inspections, and we will bring these to your attention as a courtesy.

If you are interested, all our previous newsletters are available on our website blog. Click on the following link and it will take you right to it.
