## FALLING TREES

I live in Lloyd Neck where during the last storm we actually had a tornado! Our street is no more than a mile long and at least 250 trees fell in a matter of minutes when the tornado struck. I noticed that the houses that were damaged from fallen trees had trees that were too close to them. The houses that were not damaged had trees that were far enough away from the house as to not cause any damage to the structure when they fell.

In these days of global warming, we highly suggest that you have an arborist or expert tree contractor evaluate the trees surrounding your home and remove the ones that are threatening it. And we suggest that you **put it on your schedule ASAP** rather than wait for Mother Nature's schedule. You will be glad you did during the next storm!
