## NEW BATTERY TECHNOLOGIES BEGINNING TO POWER UP HOMES

Battery technology has improved quite substantially over the last 10 years. Tesla has developed a technology whereby batteries can now be charged by solar power from rooftop panels and then used at night or when it's cloudy to power up a home. Batteries can be very successfully used to power up lawnmowers and leaf blowers, not to mention cars. Drills, circular saws, chainsaws, jigsaws, nail guns, and all manner of other equipment that has traditionally used electric power cords or gasoline can now be powered by rechargeable batteries. We can thank Elon Musk for driving much of this technology forward.
