COUNTERTOP LIGHTING

These days, it's pretty easy to light-up your countertops. LEDs now come built into a "tape," which can be applied to the underside of the cabinets, usually without much trouble. It's just like regular tape, only with embedded LEDs.

Of course, the lights still need to be plugged into an outlet or hardwired by an electrician. Either way, it's unobtrusive and relatively easily accomplished. Many of these systems come with remote control and can be dimmed and even change colors.

Most homeowners can install these in under an hour if you're using an outlet rather than hardwiring.

Many systems cost less than \$100 and are available at most home goods stores.
